

## **E-PIT™ TOOL**

**E-PIT™ (External Pipe Integrity Tool) For  
Pipeline or Boiler Tubes**

### **E-PIT™ (External Pipeline Integrity Tool)**

**E-PIT™ Tools are designed to inspect tubes & pipes from the outside surface to detect internal (ID) & external (OD) defects. This is useful for situations where a pipe must be inspected before it is taken out of service.**

**E-PIT™ can inspect through coatings (e.g. Yellow Jacket™) of up to 0.200" (5mm) thickness.**

#### **E-PIT™ Tool Applications:**

- **Detection of ID & OD defects in pipelines without need to remove coatings**
- **Detection of ID & OD defects in boiler water wall tubes**
- **Detection and sizing of ID & OD defects with equal sensitivity**
